# Sustainable repair for sustainable productivity

Our products are not only known for their quality and durability, but also for their reparability. This means that they can not only be purchased, but also repaired. This is an important aspect of our corporate philosophy, as we are aware of the importance of sustainability and cost efficiency.

By offering our customers the opportunity to repair their products, we enable them to protect their investment and extend the life of their products. This is particularly important at a time when sustainability is becoming increasingly important.

In order not to interrupt our customers' production process, we offer a replacement device during the repair period. This device can be installed by the customer's employees on site, which simplifies the process and minimizes downtime.

In this way, we ensure that our customers can continue their production without interruption, while ensuring that their products last as long as possible.

## Benefits at a glance

Immediate shipping of replacement parts to avoid downtime and costs

Replacement of parts can be done during regular maintenance

Repairs are less expensive than buying new parts

Repairs directly from the manufacturer
